

Color the Earth

We live on the Earth: a mostly-ocean-covered planet made of rock and iron, holding billions of human beings living in roughly 200 countries around the globe. The Earth is the only planet we know of that has life on it, though scientists are constantly searching for possible evidence of life on other planets. But since Earth is our home, even more work is continuously underway to improve our understanding of the land, sea, air, and interior of our home planet.

Help celebrate our world by coloring in its countries!

Instructions:

Just cut out the colored region, and make small slits at the yellow lines. Then fold up the sides of the cube, fold down all the tabs, fold along the thin grey lines, and slip the smaller tabs inside the slits. (Even easier: just cut off all the tabs and stick everything together with tape). Voila: your own map of our planet!

Of course, real planets are spherical, not cubes – but we think you'll agree that a cube is easier to cut & fold!
